Professional Summary

Android Technical Lead with over 10 years in mobile development, the last three leading teams in Argentina and Brazil. I possess a comprehensive understanding of Android development lifecycles, frameworks, architecture components, mobile analytics, Jetpack Compose, and agile methodologies.

I have a strong focus on software architecture, especially Clean Architecture and MVVM, combining technical excellence with leadership skills to guide teams and define quality standards. I am dedicated to implementing new technologies to produce scalable, maintainable, innovative, and robust applications within the Mercado Pago ecosystem.

As an enthusiast of computer science, algorithms, and programming, I continuously expand my knowledge through research, technical literature, and staying current with industry trends. I am passionate about building efficient solutions with real impact on user experience, constantly seeking challenges that drive professional growth and add value to high-impact projects.

Professional Experience

Mercado Libre — Technical Lead

March 2023 – Present

- Technical leadership of distributed teams in Argentina and Brazil: architecture definition, mentoring, code review, technical planning, and technical interviews.
- Development of complete production flows with Jetpack Compose (card enrollment, security code encrypted, etc.).
- Build and release automation: custom scripts integrated into the Gradle lifecycle and executed from CI, including mobile app hardening (obfuscation and encryption) of .aar artifacts.
- Observability and product analysis: error diagnosis with Bugsnag, backend logs with Kibana and Grafana, and querying user event and screen-view tracks in BigQuery.

Mercado Libre — Senior Android Developer

March 2021 – March 2023

- Development and maintenance of features for the Mercado Pago checkout and other key libraries of the ecosystem (card art, card enrollment, security code encrypted, Payment link).
- Clean architecture (MVVM, layer separation by responsibility, use cases), coroutines, Retrofit 2, Picasso, Koin and Service locator for dependency injection, android services.
- Unit testing and CI/CD.

Mercado Libre — Ssr Android Developer

May 2019 – March 2021

- Feature development within the Mercado Pago mobile ecosystem in Kotlin, applying MVVM and the team's architecture patterns.

IguanaFix — Android Developer

March 2018 – April 2019

- Development and maintenance of the IguanaFix customer app.
- Stack: Kotlin, RxJava, Retrofit 2, Firebase (Crashlytics, Analytics, Cloud-messaging), Room, ViewModel, Glide, Butter Knife, GoogleMaps API, Fresco, Picasso.
- Implementation of Android Architecture Components (LiveData, ViewModel, Room), MVVM pattern, and Material Design.

Fusap — Java Mobile Junior Programmer

April 2016 – February 2018

- Development of Android apps for private companies.
- Technologies: Firebase, GoogleMaps API, Volley, EventBus, Glide.

Earlier experience

- Codere Bingo — Electronics Technician (2015 – 2016)
- OSED Entidad Educativa — Customer Service (2011 – 2014)
- Freelancer — Electronics Technician (2008 – 2010)

Education

Computer Science Engineering

- Universidad Nacional de La Matanza, Buenos Aires (2014 – 2019)
- Advanced university training in software development and systems architecture, completed up to the third year

Electronics Technician

- E.E.T. N° 8, Morón, Buenos Aires (2006 – 2010)

Additional Certifications

- PC Repair and Assembly Technician (2010)
- Cell Phone Repair Technician (2010)

Technical Skills

- **Programming Languages:** Kotlin, Java, C
- **Android:** Jetpack Compose, Android SDK, Coroutines, Retrofit, Room, Koin, Firebase, Glide, Picasso
- **Architecture & Patterns:** Clean Architecture, MVVM, Repository Pattern, Use Cases, Dependency Injection
- **Practices:** Scrum, Unit Testing, CI/CD, Build Automation, App Hardening
- **Tools:** Git, Gradle, Bugsnag, Kibana, Grafana, BigQuery
- **Languages:** Spanish (Native), English
